

COPPER MYLAR TAPE

Application: Copper Mylar tape is copper foil bonded to polyester, mainly used for Coaxial Cable, LAN Cable, Signal Cable, Control Cable, Data cable, Instrumentation Cable and Communication Cable that require higher shielding insulations.

Material Properties:

Copper Layer: 0.020mm

Polyester Layer: 0.023 mm

Weight: 211g/m²

Yield: 4.73 m²/Kg

Tensile Strength: ≥120Mpa

Elongation: ≥12%

Master Roll Width: 370mm

Width Range: 6mm to 370mm Tolerance ±0.5mm

Length 1800-2200m

Packing:

Core ID: 76mm ± 1mm

Core material: Plastic

Roll OD: According to customer's requirement

Nature, Blue, and etc...

Appearance of the tape surface should be smooth, free of scratches, dents, damage, burrs and corrosions. The goods shall be packed in manufacturer's strong seaworthy packing, which suitable for long distance transportation, well protected against moisture and shocks.
